Course Information Sheet

Object Oriented Programming (ICT1223)

Document No. CRS-0080 · Academic Year 2024/2025 · Semester 2

Course Details

Field	Details
Course ID	4
Course Name	Object Oriented Programming
Course Code	ICT1223
Credit Value	3.00
Department	Information and Communication Technology (Department ID: 1)

Course Description

This course extends structured programming with the object-oriented paradigm. Students work with classes, objects, encapsulation, inheritance, polymorphism, and interfaces, and they learn to apply these mechanisms to build modular and reusable software. Design principles for constructing clear class hierarchies and managing dependencies between components are introduced alongside practical implementation exercises. The laboratory programme involves progressively larger programming tasks that mirror realistic development practice.

Learning Outcomes

On successful completion of this course, students will be able to:

- Implement classes that use encapsulation, inheritance, polymorphism, and interfaces.
- Design class hierarchies and object collaborations for a given problem statement.
- Refactor procedural solutions into well-structured object-oriented designs.
- Use development tools to test and debug object-oriented programs effectively.

Assessment and Grading

Component	Weighting	Description
Assignments and Quizzes	20%	Graded coursework issued and completed during the semester
Mid-Semester Test	10%	Written test covering the first half of the course content
Final Examination	70%	End-of-semester written examination

Note: this is a sample document generated for project testing purposes. Assessment weights and descriptive text are illustrative.
