Course Information Sheet

Biostatistics (BST1213)

Document No. CRS-0015 · Academic Year 2024/2025 · Semester 1

Course Details

Field	Details
Course ID	15
Course Name	Biostatistics
Course Code	BST1213
Credit Value	3.00
Department	Bio Systems Technology (Department ID: 3)

Course Description

This course equips students in the life sciences with the statistical methods needed to design studies and analyse biological data. It covers descriptive statistics, basic probability, common probability distributions, estimation, and hypothesis testing, including tests for means and proportions and an introduction to analysis of variance. Students also study simple linear regression and correlation for examining relationships between biological variables. Computing sessions use statistical software to analyse example datasets drawn from biology and agriculture.

Learning Outcomes

On successful completion of this course, students will be able to:

- Summarize and present biological data using appropriate descriptive statistics.
- Apply probability models and distributions commonly used in the life sciences.
- Conduct hypothesis tests for means, proportions, and differences between groups.
- Use simple linear regression and correlation to examine relationships between variables.

Assessment and Grading

Component	Weighting	Description
Assignments and Quizzes	20%	Graded coursework issued and completed during the semester
Mid-Semester Test	10%	Written test covering the first half of the course content
Final Examination	70%	End-of-semester written examination

Note: this is a sample document generated for project testing purposes. Assessment weights and descriptive text are illustrative.
