Course Information Sheet

Engineering Mechanics (ET1123)

Document No. CRS-0049 · Academic Year 2023/2024 · Semester 1

Course Details

Field	Details
Course ID	11
Course Name	Engineering Mechanics
Course Code	ET1123
Credit Value	2.00
Department	Engineering Technology (Department ID: 2)

Course Description

This course introduces the statics and elementary dynamics principles that underpin engineering technology. Students analyse force systems, equilibrium of rigid bodies, trusses, friction, and the properties of areas, together with basic kinematics and kinetics of particles. The course stresses correct free-body diagrams and systematic equation formulation as the basis of sound engineering analysis. Tutorial and laboratory work connect theory to simple structures, machines, and measurement exercises.

Learning Outcomes

On successful completion of this course, students will be able to:

- Construct free-body diagrams and formulate equilibrium equations for rigid bodies.
- Analyse simple trusses and frames using systematic methods.
- Solve problems involving friction, centroids, and moments of inertia.
- Apply elementary kinematics and kinetics to particle motion problems.

Assessment and Grading

Component	Weighting	Description
Assignments and Quizzes	20%	Graded coursework issued and completed during the semester
Mid-Semester Test	10%	Written test covering the first half of the course content
Final Examination	70%	End-of-semester written examination

Note: this is a sample document generated for project testing purposes. Assessment weights and descriptive text are illustrative.
