Course Information Sheet

Database Management Systems (ICT1233)

Document No. CRS-0060 · Academic Year 2024/2025 · Semester 2

Course Details

Field	Details
Course ID	3
Course Name	Database Management Systems
Course Code	ICT1233
Credit Value	3.00
Department	Information and Communication Technology (Department ID: 1)

Course Description

This course covers the principles and practice of designing and managing relational databases. Students study the relational model, entity-relationship modelling, normalization, and structured query language (SQL) for defining and manipulating data. Additional topics include transaction management, concurrency control, and an overview of database administration and security. Laboratory work centres on building and querying realistic databases for typical business and academic scenarios.

Learning Outcomes

On successful completion of this course, students will be able to:

- Design a relational database using entity-relationship modelling and normalization.
- Write SQL statements to define, query, and update a relational database.
- Explain transaction management, concurrency control, and data integrity concepts.
- Evaluate database security and administration requirements for a given scenario.

Assessment and Grading

Component	Weighting	Description
Assignments and Quizzes	20%	Graded coursework issued and completed during the semester
Mid-Semester Test	10%	Written test covering the first half of the course content
Final Examination	70%	End-of-semester written examination

Note: this is a sample document generated for project testing purposes. Assessment weights and descriptive text are illustrative.
