Course Information Sheet

Operating Systems (ICT2223)

Document No. CRS-0010 · Academic Year 2024/2025 · Semester 2

Course Details

Field	Details
Course ID	10
Course Name	Operating Systems
Course Code	ICT2223
Credit Value	3.00
Department	Information and Communication Technology (Department ID: 1)

Course Description

This course examines the structure and responsibilities of modern operating systems. Topics include processes and threads, CPU scheduling, synchronization and deadlock, memory management and virtual memory, file systems, and input/output management. Concepts are illustrated with reference to widely used operating systems and reinforced through laboratory exercises that observe or simulate operating system behaviour. The course explains how abstraction and resource sharing shape the interface between hardware and application software.

Learning Outcomes

On successful completion of this course, students will be able to:

- Explain process management, scheduling, and inter-process communication mechanisms.
- Analyse synchronization problems and apply standard solutions.
- Describe memory management, virtual memory, and file system organization.
- Use system tools to observe and interpret operating system behaviour.

Assessment and Grading

Component	Weighting	Description
Assignments and Quizzes	20%	Graded coursework issued and completed during the semester
Mid-Semester Test	10%	Written test covering the first half of the course content
Final Examination	70%	End-of-semester written examination

Note: this is a sample document generated for project testing purposes. Assessment weights and descriptive text are illustrative.
