Course Information Sheet

Computer Networks (ICT2113)

Document No. CRS-0025 · Academic Year 2024/2025 · Semester 1

Course Details

Field	Details
Course ID	6
Course Name	Computer Networks
Course Code	ICT2113
Credit Value	3.00
Department	Information and Communication Technology (Department ID: 1)

Course Description

This course examines the principles and protocols of modern computer networks. Starting from a layered architecture, students study the physical, data link, network, and transport layers, with particular attention to the TCP/IP protocol suite and Internet addressing. Practical work includes configuring small networks, analysing protocol behaviour with packet-capture tools, and examining routing and switching fundamentals. Network security and network management topics provide a broader operational perspective.

Learning Outcomes

On successful completion of this course, students will be able to:

- Describe the layered architecture of computer networks and the role of each layer.
- Explain the operation of core TCP/IP protocols, including addressing and routing.
- Configure and troubleshoot a small local area network in the laboratory.
- Analyse protocol behaviour using packet-capture tools and interpret the results.

Assessment and Grading

Component	Weighting	Description
Assignments and Quizzes	20%	Graded coursework issued and completed during the semester
Mid-Semester Test	10%	Written test covering the first half of the course content
Final Examination	70%	End-of-semester written examination

Note: this is a sample document generated for project testing purposes. Assessment weights and descriptive text are illustrative.
