Course Information Sheet

Software Engineering (ICT2213)

Document No. CRS-0085 · Academic Year 2024/2025 · Semester 1

Course Details

Field	Details
Course ID	9
Course Name	Software Engineering
Course Code	ICT2213
Credit Value	3.00
Department	Information and Communication Technology (Department ID: 1)

Course Description

This course introduces the discipline of engineering quality software in teams. Students study software process models, requirements elicitation and specification, architectural and detailed design, implementation practices, testing, and the fundamentals of software project management. The social and professional responsibilities of software engineers, including maintenance and evolution of long-lived systems, are discussed throughout. A semester-long group project applies the practices to a small but realistic development scenario.

Learning Outcomes

On successful completion of this course, students will be able to:

- Compare software process models and select one appropriate to a project context.
- Elicit, document, and validate software requirements for a given scenario.
- Apply design principles and testing techniques across the development lifecycle.
- Participate effectively in a team project using version control and planning practices.

Assessment and Grading

Component	Weighting	Description
Assignments and Quizzes	20%	Graded coursework issued and completed during the semester
Mid-Semester Test	10%	Written test covering the first half of the course content
Final Examination	70%	End-of-semester written examination

Note: this is a sample document generated for project testing purposes. Assessment weights and descriptive text are illustrative.
