Course Information Sheet

Soil Science (BST2113)

Document No. CRS-0019 · Academic Year 2023/2024 · Semester 1

Course Details

Field	Details
Course ID	19
Course Name	Soil Science
Course Code	BST2113
Credit Value	3.00
Department	Bio Systems Technology (Department ID: 3)

Course Description

This course examines soil as a natural body and as a medium for plant growth. Students study soil formation, physical properties, soil water, soil chemistry and fertility, and the classification of soils. The interaction between soil management practices, crop production, and environmental quality is examined, including erosion, nutrient management, and soil health. Field and laboratory practicals cover soil sampling, texture and pH determination, and the interpretation of soil analysis results.

Learning Outcomes

On successful completion of this course, students will be able to:

- Describe soil formation processes and the physical and chemical properties of soils.
- Explain soil water dynamics, fertility, and nutrient availability to plants.
- Classify soils and interpret soil survey and analysis information.
- Evaluate soil management practices for crop production and environmental protection.

Assessment and Grading

Component	Weighting	Description
Assignments and Quizzes	20%	Graded coursework issued and completed during the semester
Mid-Semester Test	10%	Written test covering the first half of the course content
Final Examination	70%	End-of-semester written examination

Note: this is a sample document generated for project testing purposes. Assessment weights and descriptive text are illustrative.
