Course Information Sheet

Introduction to Programming (ICT1113)

Document No. CRS-0039 · Academic Year 2023/2024 · Semester 1

Course Details

Field	Details
Course ID	1
Course Name	Introduction to Programming
Course Code	ICT1113
Credit Value	3.00
Department	Information and Communication Technology (Department ID: 1)

Course Description

This course introduces the fundamental principles of computer programming using a high-level language. Students learn how to write, compile, and debug simple programs, and they practise structuring solutions using variables, control structures, loops, and functions. The course emphasizes systematic problem decomposition and step-by-step refinement of algorithms. Practical laboratory sessions reinforce the concepts introduced in lectures and build confidence in translating a problem statement into working code.

Learning Outcomes

On successful completion of this course, students will be able to:

- Explain the basic building blocks of a computer program, including variables, data types, and operators.
- Write, compile, and debug small programs using control structures and functions.
- Decompose simple problems into steps that can be implemented as an algorithm.
- Apply coding standards and basic testing techniques to produce readable, correct programs.

Assessment and Grading

Component	Weighting	Description
Assignments and Quizzes	20%	Graded coursework issued and completed during the semester
Mid-Semester Test	10%	Written test covering the first half of the course content
Final Examination	70%	End-of-semester written examination

Note: this is a sample document generated for project testing purposes. Assessment weights and descriptive text are illustrative.
