# Course Information Sheet

## Introduction to Programming (ICT1113)

Document No. CRS-0096 · Academic Year 2020/2021 · Semester 2

## Course Details

| Field | Details |
|---|---|
| Course ID | 1 |
| Course Name | Introduction to Programming |
| Course Code | ICT1113 |
| Credit Value | 3.00 |
| Department | Information and Communication Technology (Department ID: 1) |

## Course Description

This course introduces the fundamental principles of computer programming using a high-level language. Students learn how to write, compile, and debug simple programs, and they practise structuring solutions using variables, control structures, loops, and functions. The course emphasizes systematic problem decomposition and step-by-step refinement of algorithms. Practical laboratory sessions reinforce the concepts introduced in lectures and build confidence in translating a problem statement into working code.

## Learning Outcomes

On successful completion of this course, students will be able to:

- Explain the basic building blocks of a computer program, including variables, data types, and operators.
- Write, compile, and debug small programs using control structures and functions.
- Decompose simple problems into steps that can be implemented as an algorithm.
- Apply coding standards and basic testing techniques to produce readable, correct programs.

## Assessment and Grading

| Component | Weighting | Description |
|---|---|---|
| Assignments and Quizzes | 20% | Graded coursework issued and completed during the semester |
| Mid-Semester Test | 10% | Written test covering the first half of the course content |
| Final Examination | 70% | End-of-semester written examination |

*Note: this is a sample document generated for project testing purposes. Assessment weights and descriptive text are illustrative.*
