# Course Information Sheet

## Software Engineering (ICT2213)

Document No. CRS-0066 · Academic Year 2020/2021 · Semester 2

## Course Details

| Field | Details |
|---|---|
| Course ID | 9 |
| Course Name | Software Engineering |
| Course Code | ICT2213 |
| Credit Value | 3.00 |
| Department | Information and Communication Technology (Department ID: 1) |

## Course Description

This course introduces the discipline of engineering quality software in teams. Students study software process models, requirements elicitation and specification, architectural and detailed design, implementation practices, testing, and the fundamentals of software project management. The social and professional responsibilities of software engineers, including maintenance and evolution of long-lived systems, are discussed throughout. A semester-long group project applies the practices to a small but realistic development scenario.

## Learning Outcomes

On successful completion of this course, students will be able to:

- Compare software process models and select one appropriate to a project context.
- Elicit, document, and validate software requirements for a given scenario.
- Apply design principles and testing techniques across the development lifecycle.
- Participate effectively in a team project using version control and planning practices.

## Assessment and Grading

| Component | Weighting | Description |
|---|---|---|
| Assignments and Quizzes | 20% | Graded coursework issued and completed during the semester |
| Mid-Semester Test | 10% | Written test covering the first half of the course content |
| Final Examination | 70% | End-of-semester written examination |
